

## Drowsy with Depression

by NEWLIFEOUTLOOK TEAM

---

### Your Fatigue in Depression

With a major depressive episode, you likely don't feel like doing anything. You may experience a lack of interest in things that you used to enjoy doing. You should take your medications or participate in therapy and then get out and start exercising. Any form of exercise that you do will activate chemicals in your brain and can help you to feel better. If you exercise outside, you're likely to see an even better increase, especially if you have seasonal affective disorder. Part of the cause of seasonal affective disorder is not getting enough vitamin D and sunlight from staying indoors. Dress warmly and have a walk and pick up a hot drink on the way during the winter.

Slow  
Lethargic

## What is Fatigue?

**Fatigue is:**  
Lack of Motivation  
Lack of Energy  
Wearing Out Easily  
Real

**Fatigue isn't:**  
Lack of Passion  
Laziness  
Just Being Tired  
Fake or Imagined

## Fatigue Can Affect:

- Your mood
- Physical function
- Work performance
- Social interaction
- Family care
- Cognitive performance
- School work
- Community activities
- Sense of self
- Your appetite

## Measuring Fatigue

The Fatigue Severity Scale (FSS) is a self-reported questionnaire used to measure your fatigue. It consists of ...

# NINE Questions, each rated on a scale of 1-7

To score the Fatigue Severity Scale either add all items together (this will range from 9-63) or find the mean by adding your items together and dividing by 9 (this will range from 1-9).

In either case, the higher the number you calculate is, the more fatigued you are.

## Tips for Reducing Fatigue

- Quantity & Quality of Sleep**
  - Have a regular bed time and wake up time
  - Use your bed just for sleeping
  - Do quiet activities if you're not sleepy
  - Room should be dark and quiet
- Proper Nutrition**
  - Get daily value of vitamin and minerals
  - Find out about proper nutrition at [choosemyplate.gov](http://choosemyplate.gov)
  - Contact your doctor or a nutritionist/dietitian so you can get the most out of what you eat
- Regular Exercise**
  - Choose an enjoyable exercise
  - Do what you can and then try doing a little bit more each day
  - Try tai chi and yoga to combine stretching, breathing, and calming exercises
- Relaxation**
  - Avoid stress or stressful situations
  - Do what you find relaxing: read a book, do yoga, sit outside, listen to music, etc.
- Balance Work and Personal Life**
  - Spend your time off work with family, friends, or doing preferred activities
  - Limit the amount of work you bring home with you
- Avoid Drug Use**
  - Avoid stimulants including: coffee, nicotine, methamphetamines, cocaine
  - Avoid sedatives
